| Companies' Transition Plans                         |  | Portfolio |
|---|--|-----------|
| Companies with GHG emission reduction targets       |  | 94.1%     |
| Companies with targets across all scopes            |  | 73.4%     |
| Companies with SBTi approved targets                |  | 61.5%     |
| Companies with top quartile carbon management score |  | 71.1%     |

# Carbon Emissions: Sectoral Footprint

## Financed Carbon Emission (S1+S2) by Sector

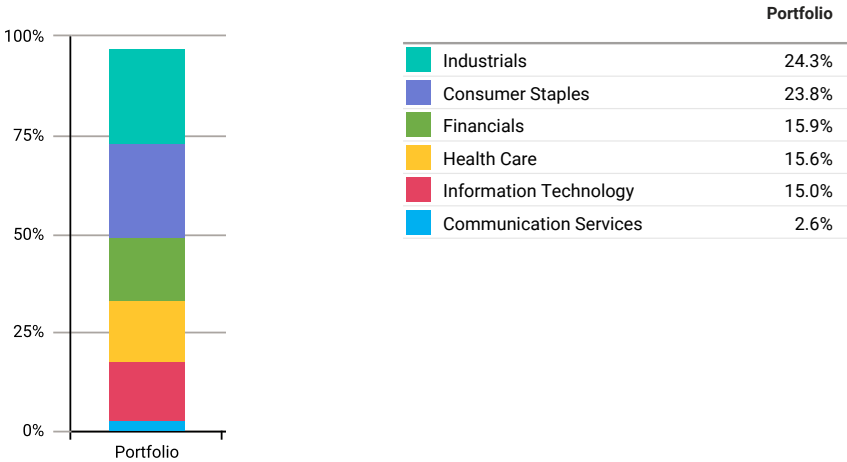

|                        | Portfolio |
|------------------------|-----------|
| Consumer Staples       | 14.6      |
| Information Technology | 10.5      |
| Industrials            | 4.6       |
| Health Care            | 3.7       |
| Communication Services | 1.7       |
| Financials             | 0.5       |
| Total                  | 7.0       |

## Sectoral Contribution to Financed Carbon Emissions (S1+S2)

|                        | Portfolio |
|------------------------|-----------|
| Communication Services | 0.6%      |
| Consumer Staples       | 50.8%     |
| Financials             | 1.1%      |
| Health Care            | 8.4%      |
| Industrials            | 16.2%     |
| Information Technology | 22.9%     |

## Sector Weight to Financed Carbon Emissions (S1+S2)

Market Cap Weight

The column chart shows the composition of the portfolio by market capitalization to financed carbon emissions. This highlights that dominant sectors, in terms of emissions, tend to be Energy, Utilities, and Materials.

Contribution to Financed Carbon Emissions

The pie chart shows the composition by each sector's contribution to financed carbon emissions. This highlights that dominant sectors, in terms of emissions, tend to be Energy, Utilities, and Materials.

# Carbon Emission: Trends and Profile

Weighted Average Carbon Intensity of Current Holdings Over Time

\* Current refers to the selected analysis date and provides additional context to the analysis. For example, the figure shown could either be in the past at a specific point in time, or the present date if not specified.

**Change across 5 years = -29.3%**      **Change since baseline NZ year of 2019 = -26.2%**

The chart above shows change over time of the weighted average carbon intensity (WACI) of the portfolio constituents and weights at the date of analysis. This analysis is intended to provide an understanding of how the companies in the portfolio have decarbonised over time, as investors increasingly monitor decarbonisation to support climate commitments such as net zero.

The portfolio WACI is illustrated with blue circles. Please note that the analysis does not take into account changes in constituents over this time period.

Portfolio coverage of this metric is also provided which provides contextual information. For example, a lower WACI figure may be related to lower coverage of that metric in a certain year. There can be lower coverage due to companies' reporting cycles and take time in different regions around the world.

Also provided is a % change of the WACI over a 5-year period and a % change compared to the commonly used net zero baseline year of 2019 for further monitoring and reporting.

Contribution of Emissions by Scope

The chart above illustrates the emissions profile of the portfolio denoting the share between Scopes 1, 2, and 3 emissions. Please note Scope 3 here utilises a combination of estimated and reported emissions data.

# Climate Scenario Analysis

## Climate Value at Risk

Selected Scenario : 1.5°C NGFS Orderly

## Climate VaR Portfolio Coverage Summary

|                                      | Portfolio |
|--------------------------------------|-----------|
| Policy Climate VaR (Scope 1,2,3)     | 97.2%     |
| Technology Opportunities Climate VaR | 91.5%     |
| Physical Climate VaR                 | 97.2%     |

## Top 10 Physical Risk Climate VaR Companies

| Security                                 | Physical Risk Climate VaR Contribution |   | Primary Physical Risk Hazard |
|--|--|---|------------------------------|
| RECKITT BENCKISER GROUP PLC              | -0.62%                                 |    | Coastal Flooding             |
| EATON CORPORATION PUBLIC LIMITED COMPANY | -0.08%                                 |    | Coastal Flooding             |
| DANONE SA                                | -0.06%                                 |    | Extreme Heat                 |
| UNILEVER PLC                             | -0.06%                                 |    | Extreme Heat                 |
| Nestle S.A.                              | -0.04%                                 |    | Extreme Heat                 |
| PUBLICIS GROUPE S.A.                     | -0.03%                                 |   | Coastal Flooding             |
| AFLAC INCORPORATED                       | -0.03%                                 |  | Coastal Flooding             |
| CISCO SYSTEMS, INC.                      | -0.03%                                 |  | Extreme Heat                 |
| MEDTRONIC PUBLIC LIMITED COMPANY         | -0.03%                                 |  | Extreme Heat                 |
| Roche Holding AG                         | -0.02%                                 |  | Extreme Heat                 |

The table provides information on the most exposed companies to physical risk exposure in the portfolio such as extreme weather events in the selected physical risk scenario. However, physical risks can be both positive and negative and be expressed in both positive and negative values. MSCI currently models ten hazards including extreme heat and cold, coastal and river flooding, wildfires as well as wind gusts and precipitation. Physical changes can be event-driven ('acute') or longer-term in nature ('chronic').

# Climate Value at Risk

## Top 10 Aggregated Climate VaR Risk Contributors

| Security                                 | Aggregated Policy Risk Climate VaR | Technology Opportunities Climate VaR | Physical Risk Climate VaR | Aggregated Climate VaR | Weight (%) | Climate VaR Risk Contribution |
|--|------------------------------------|--------------------------------------|---------------------------|------------------------|------------|-------------------------------|

| ASSA ABLOY AB                            | -3.97%                             | 0.00%                                | -0.88%                    | -4.84%                 | 2.58%      | -0.13%                        |
| EATON CORPORATION PUBLIC LIMITED COMPANY | -2.07%                             | 0.22%                                | -2.71%                    | -4.56%                 | 2.70%      | -0.12%                        |
| SONIC HEALTHCARE LIMITED                 | -3.65%                             | 0.00%                                | -0.77%                    | -4.41%                 | 2.49%      | -0.11%                        |

The table provides an overview of the companies with the highest negative Aggregated Climate VaR contribution in the portfolio. The position weight of each individual security in the portfolio is multiplied by the Aggregated Climate VaR to establish the Climate VaR risk contribution of the portfolio. Aggregated Climate VaR in this chart is the sum of Policy Risk from Direct GHG Emissions (Scope 1) Climate VaR, Technology Opportunities Climate VaR and Physical Climate VaR for the selected scenario.

Climate VaR numbers are calculated at the security level, i.e. 2 securities associated with the same issuer could have different Climate VaR.

## Portfolio Level Sovereign Climate VaR Results

|                          | Portfolio |
|--------------------------|-----------|
| 1p5C NGFS Orderly        | 0.00%     |
| 1p5C NGFS Disorderly     | 0.00%     |
| 2C NGFS Orderly          | 0.00%     |
| 2C NGFS Disorderly       | 0.00%     |
| 3C NGFS Current Policies | 0.00%     |
| 3C NGFS                  | 0.00%     |
| Coverage                 | 0.00%     |

## Portfolio Weights of Largest Contributor Countries by Time-to-maturity

| Country/Duration | Total        |
|------------------|--------------|
| <b>Total</b>     | <b>0.00%</b> |

Total includes all other country buckets not listed in the above list.

Coverage here denotes total portfolio coverage across all asset classes, not only the sovereign portion of the portfolio. The coverage metrics presented in this report are computed in the context of the entire long-only side of the portfolio – no weight adjustments are performed for the respective scopes of corporate or sovereign exposures.

## Understanding Sovereign Climate VaR

Sovereign Bond Climate VaR is designed to provide a forward-looking and return-based valuation assessment to measure climate related risks in a sovereign bond investment portfolio. The fully quantitative model offers insights into how climate change could affect sovereign bond valuations through the use of a stress testing framework. It estimates the change in the sovereign yield curve when market expectations move from a climate-agnostic baseline expectation to any other climate scenario. Yield curve changes are then used to stress test the value of local-currency sovereign bonds.

The model produces two types of outputs: the potential impact of climate change and economic decarbonization on implied yield curves and sovereign bond valuations.

# Implied Temperature Rise

MSCI Implied Temperature Rise Company Analysis

Aggregated Implied Temperature Rise

**Portfolio:** 1.9°C

Implied Temperature Rise: Companies with Highest Temperature Alignment

| Company Name                                 | Weight | Implied Temperature Rise |
|--|--------|--------------------------|
| MEDTRONIC PUBLIC LIMITED COMPANY             | 2.6%   | 4.8°C                    |
| EATON CORPORATION PUBLIC LIMITED COMPANY     | 2.7%   | 4.5°C                    |
| ABB Ltd                                      | 2.5%   | 3.4°C                    |
| TEXAS INSTRUMENTS INCORPORATED               | 2.5%   | 3.3°C                    |
| BROADCOM INC.                                | 3.4%   | 2.6°C                    |
| Taiwan Semiconductor Manufacturing Co., Ltd. | 3.1%   | 2.6°C                    |
| DANONE SA                                    | 2.7%   | 2.4°C                    |

Implied Temperature Rise: Companies with Lowest Temperature Alignment

| Company Name                       | Weight | Implied Temperature Rise |
|------------------------------------|--------|--------------------------|
| AFLAC INCORPORATED                 | 3.1%   | 1.3°C                    |
| Deutsche Boerse Aktiengesellschaft | 3.1%   | 1.3°C                    |
| JOHNSON & JOHNSON                  | 2.6%   | 1.3°C                    |
| NOVO NORDISK A/S                   | 2.2%   | 1.3°C                    |
| PUBLICIS GROUPE S.A.               | 2.6%   | 1.4°C                    |
| Atlas Copco Aktiebolag             | 2.6%   | 1.4°C                    |
| ASSA ABLOY AB                      | 2.6%   | 1.4°C                    |
| MICROSOFT CORPORATION              | 2.6%   | 1.4°C                    |
| DIAGEO PLC                         | 2.5%   | 1.4°C                    |
| RECKITT BENCKISER GROUP PLC        | 3.0%   | 1.5°C                    |

**Implied Temperature Rise**

The Implied Temperature Rise (ITR) metric provides an indication of how well public companies align with global temperature goals. Expressed in degrees Celsius, it is an intuitive, forward-looking that shows how a company aligns with the ambitions of the Paris Agreement – which is to keep a global temperature rise this century well below 2°C above pre-industrial levels and to pursue efforts to limit the temperature increase even further to 1.5°C. The portfolio-level Implied Temperature Rise compares the sum of “owned” projected GHG emissions against the sum of “owned” carbon budgets for the underlying fund holdings. The portfolio's total estimated carbon budget over- / undershoot is then converted to a degree of temperature rise (°C) using the TCRE. The allocation base used to define ownership is Enterprise Value including Cash (EVIC) in order to enable the analysis of equity and corporate bond portfolios.
